EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Roy W. Truelson, Reg. No. 34,265, on 01/06/05.

In the claims:

Claim 1, line 17, change "in unison to a next stage within said asynchronous pipeline." to --in unison to a next stage within said asynchronous pipeline, wherein passing of each said data tag value and the data set to which said matching data tag value is assigned to respective next stages of said plurality of pipeline stages within said asynchronous pipeline is not synchronized to a common global clock signal.--.

Claim 8, line 17, change "asynchronous pipeline." to --asynchronous pipeline, wherein passing of each said data tag value and the data set to which said matching data tag value is assigned to respective next stages of said plurality of pipeline stages within said asynchronous pipeline is not synchronized to a common global clock signal.--.

Claim 15, line 16, change "matches a control tag value associated with the stage transition." to --matches a control tag value associated with the stage transition, wherein advancing of each data

set and its corresponding data tag to respective successive stages of said plurality of ordered stages of said pipeline is not synchronized to a common global clock signal.--.

Allowable Subject Matter

5. The following is an examiner's statement of reasons for allowance: Janik has taught an asynchronous pipeline, with a plurality of stages, and a data path and a control path, assigning a data tag to each set of data, and where the data tag and the data pass through the control path, and the data path, respectively, in unison, comparing the data tag with an instruction, and in response to a match while comparing, passing the data tag and data on to the next stage and passing the data on to the next respective stage asynchronously, without use of a global clock. Chu, U.S. Patent Number 5, 920, 899, (herein referred to as Chu) has taught an asynchronous pipeline, with a plurality of stages, with a data path, and control mechanism, and passing the data on to the next respective stage asynchronously, without use of a global clock. However, neither Janik, nor Chu, or any previously mentioned prior art has taught individually, or in combination, an asynchronous pipeline, with a plurality of stages, and a data path and a control path, assigning a data tag to each set of data, and where the data tag and the data pass through the control path, and the data path, respectively, in unison, where the data tag value is always in the same pipeline stage as the data set to which the data tag is assigned, comparing the data tag with an instruction, and in response to a match while comparing, passing the data tag and data on to the next stage and passing the data on to the next respective stage asynchronously, without use of a global clock, as described in the claims and the remarks from 6/24/04.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
